

User Acceptance Testing (UAT) Report

Auto Ticket Classification Using Flow Designer

Date	03 October 2026
Team ID	SWTID-2026-4089
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Project Overview:

Project Name: Auto Ticket Classification Using Flow Designer

Project Description: A ServiceNow Flow Designer automation that evaluates newly created support tickets, classifies them using configured conditions or keywords, and updates the ticket category and assignment group. The solution reduces manual triage and improves consistency in first-level ticket routing.

Project Version: 1.0

Testing Period: 03 October 2026; execution evidence and completion date to be recorded after UAT execution.

Testing Scope:

The UAT scope covers the following features and requirements:

Feature / Requirement	UAT Coverage
Flow trigger	The flow starts automatically when a new support ticket is created.
Ticket data evaluation	The flow reads the configured ticket fields, including the short description and relevant details.
Classification rules	Network, hardware, access, and email-related descriptions are evaluated against configured conditions.
Category assignment	The expected ticket category is selected for a matching description.
Assignment routing	The ticket is routed to the correct support group.
Fallback handling	Unmatched tickets follow a defined fallback path for manual review or general classification.
Record integrity	Only intended ticket fields are changed by the flow.

Testing Environment:

Environment Item	Details
Platform	ServiceNow
Automation	Flow Designer
URL / Location	ServiceNow development or test instance configured for the project
Test data	Sample support tickets covering matching and unmatched descriptions
Credentials	Use authorized project tester credentials; no credentials are included in this report.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass / Fail
TC-001	Flow trigger	1. Create a new support ticket. 2. Save the ticket.	Flow Designer is triggered automatically.	To be recorded during UAT.	Pending
TC-002	Network classification	1. Create a ticket with a network-related description. 2. Allow the flow to run.	Network category and Network Support group are assigned.	To be recorded during UAT.	Pending
TC-003	Hardware classification	1. Create a ticket describing a hardware issue. 2. Check the updated fields.	Hardware category and Hardware Support group are assigned.	To be recorded during UAT.	Pending
TC-004	Access classification	1. Create an access-related ticket. 2. Review category and group.	The configured access category and IT support group are assigned.	To be recorded during UAT.	Pending
TC-005	Email classification	1. Create an email-related ticket. 2. Review the flow result.	The configured email category and assignment group are assigned.	To be recorded during UAT.	Pending
TC-006	Record update	1. Submit a matching ticket. 2. Compare fields before and after the flow.	Category and assignment group update correctly; unrelated data remains unchanged.	To be recorded during UAT.	Pending
TC-007	Unmatched ticket	1. Create a ticket with no matching keywords or conditions. 2. Review the result.	Fallback path is used and the ticket remains available for manual review.	To be recorded during UAT.	Pending
TC-008	Repeatability	1. Create equivalent tickets more than once. 2. Compare classification results.	Equivalent inputs produce consistent classification and routing results.	To be recorded during UAT.	Pending

Execution note: Replace "To be recorded during UAT" and "Pending" with the actual evidence and result after each case is executed.

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
N/A	No defects were reported in the information provided for this report.	Not applicable.	—	No defects reported	Update this table if a UAT test case fails or requires retesting.

Sign-off:

Tester Name	To be completed by the authorized tester
Date of Test Completion	To be completed after UAT execution
Signature	Pending tester and project-owner approval
Acceptance Status	Pending execution evidence and final sign-off

Notes:

- All test cases should cover both positive and negative scenarios where applicable.
- Testers should record detailed actual results and attach screenshots or execution evidence.
- Any defect should include severity, status, steps to reproduce, and retest information.
- Final acceptance should be approved by the project manager or product owner before deployment.
