

Project Design Phase-II

Data Flow Diagram & User Stories

Date	03 October 2026
Project ID	SWTID-2026-4089
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

User Stories

Use the below template to list all the user stories for the product: Auto Ticket Classification using Flow Designer.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer / Agent	Ticket Intake	USN-1	As a customer or agent, I can submit a support ticket with subject, description, and attachments.	A ticket is created with a unique number and all required details.	High	Sprint-1
Customer / Agent	Ticket Intake	USN-2	As a customer, I can view the ticket status and classification assigned by the system.	The portal displays category, priority, assignment group, and status.	Medium	Sprint-1
Flow Designer	Classification	USN-3	As the system, I can trigger a Flow Designer flow when a new ticket is created or updated.	The correct flow runs once and records the execution result.	High	Sprint-1
Flow Designer	Classification	USN-4	As the system, I can classify a ticket using keywords, rules, and knowledge-base context.	The ticket receives a category and confidence/result reason.	High	Sprint-2
Flow Designer	Prioritization	USN-5	As the system, I can identify urgency and impact and set the ticket priority.	Priority follows the configured decision rules and is auditable.	High	Sprint-2
Customer Care Executive	Assignment	USN-6	As a support executive, I can receive tickets routed to the correct assignment group.	The ticket appears in the right queue with no duplicate assignment.	High	Sprint-2
Customer Care Executive	Review	USN-7	As a support executive, I can correct a wrong classification and provide feedback.	The correction is saved, logged, and available for rule improvement.	Medium	Sprint-3
Administrator	Configuration	USN-8	As an administrator, I can manage classification rules, categories, and routing mappings.	Only authorized administrators can change active configuration.	High	Sprint-3
Administrator	Monitoring	USN-9	As an administrator, I can view flow failures, classification accuracy, and processing time.	A dashboard shows success rate, exceptions, and audit history.	Medium	Sprint-3

Flow Designer automation should maintain an audit trail for every classification, routing decision, exception, and manual correction.
