

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Project ID	SWTID-2026-4089
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Intake	Create ticket from portal, email, or service channel; capture subject, description, attachments, and requester details.
FR-2	Ticket Classification	Trigger Flow Designer on ticket creation/update; classify using rules, keywords, and knowledge-base context.
FR-3	Prioritization & Routing	Set category, urgency, impact, priority, assignment group, and notification path automatically.
FR-4	Review & Audit	Allow authorized agents to correct classifications and record flow execution, decisions, exceptions, and feedback.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Agents can understand the classification result and correct routing with minimal steps.
NFR-2	Security	Only authorized roles can view tickets, modify rules, or override classification decisions.
NFR-3	Reliability	Flows handle retries, duplicate events, missing data, and exceptions without losing tickets.
NFR-4	Performance	Classification and routing complete within the configured service target for normal ticket volume.
NFR-5	Availability	Ticket intake and automated classification remain available during supported service hours.
NFR-6	Scalability	The solution supports increased ticket volume, categories, rules, and assignment groups.
