

Project Design Phase-II Technology Stack (Architecture & Stack)

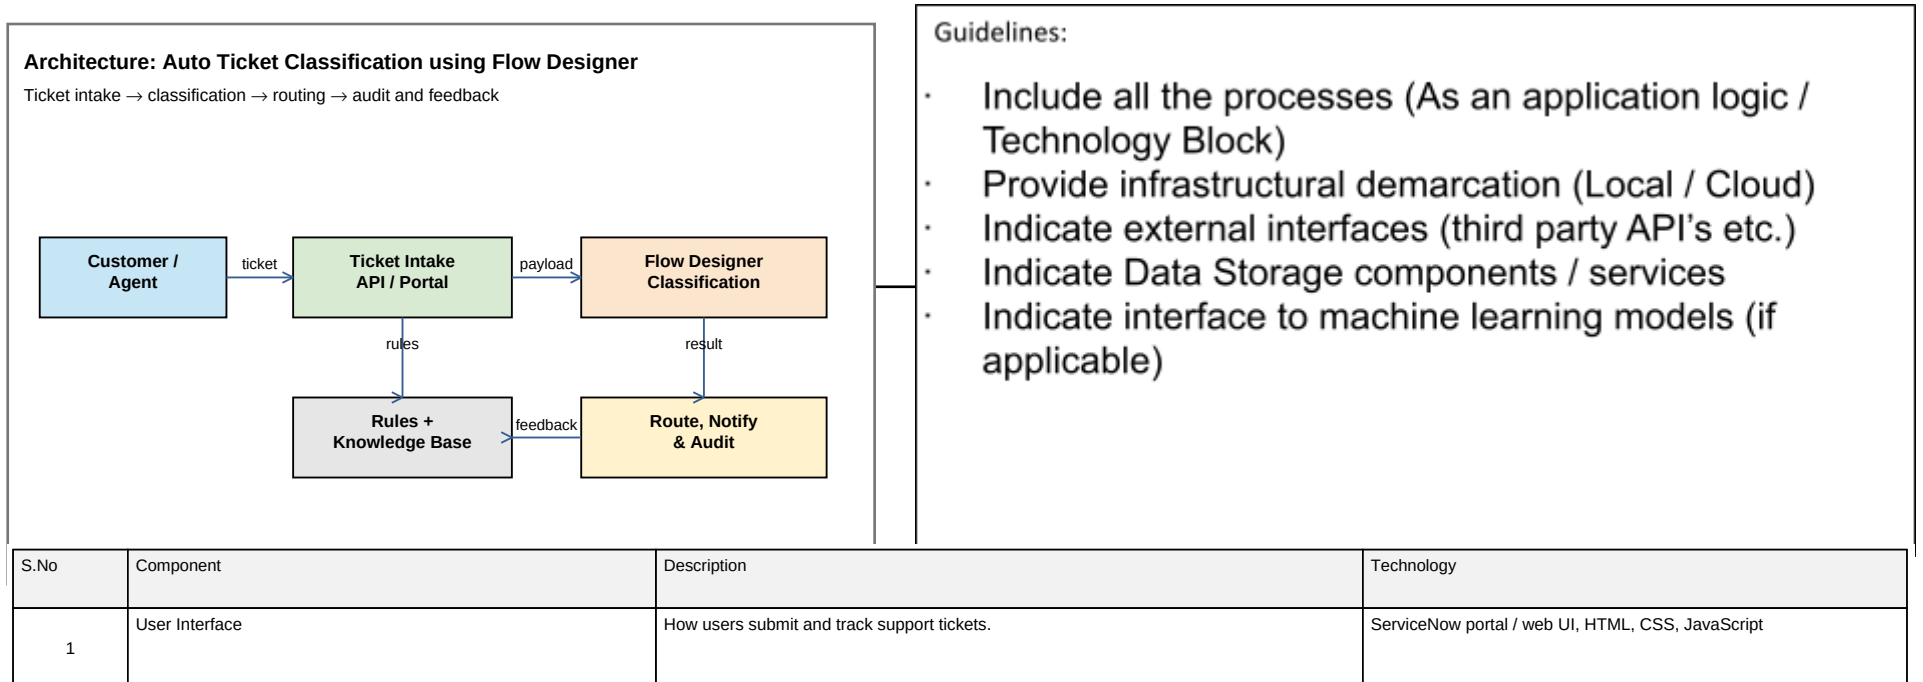

Date	03 October 2026
Project ID	SWTID-2026-4089
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Flow Designer architecture for automated ticket classification

The solution receives support requests, classifies them, routes them to the appropriate group, and records an audit trail.

S.No	Component	Description	Technology
2	Application Logic-1	Create and validate ticket records and trigger events.	ServiceNow Flow Designer
3	Application Logic-2	Classify request using rules, keywords, and knowledge context.	Flow Designer actions + decision tables
4	Application Logic-3	Assign category, priority, group, notifications, and exceptions.	ServiceNow Business Rules / Flow Actions
5	Database	Store tickets, categories, priorities, assignments, and audit data.	ServiceNow platform tables / CMDB reference data
6	Cloud Database	Managed data service supporting the platform.	ServiceNow Now Platform data layer
7	File Storage	Store ticket attachments and supporting evidence.	ServiceNow attachment storage
8	External API-1	Optional inbound support request integration.	REST API / email ingestion
9	External API-2	Optional enrichment or notification integration.	REST API / webhooks / Teams or email
10	Machine Learning Model	Optional confidence-based classification and suggested category.	ServiceNow Predictive Intelligence / classification model
11	Infrastructure (Server / Cloud)	Application deployment and execution environment.	ServiceNow cloud instance; Flow Designer runtime

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	Frameworks used for integrations and supporting scripts.	REST, JSON, JavaScript
2	Security Implementations	Role-based access, encrypted transport, and controlled rule changes.	ACLs, HTTPS/TLS, IAM roles, OWASP practices
3	Scalable Architecture	Modular flow actions and reusable subflows support growing ticket volume.	Flow Designer subflows, queues, asynchronous actions
4	Availability	Cloud platform and retry/error handling support continuous service.	ServiceNow cloud HA, monitoring, retries

S.No	Characteristics	Description	Technology
5	Performance	Design for timely classification and routing as ticket volume grows.	Asynchronous flows, indexed fields, caching, monitoring
